About Us

UNISOFT INDIA Pvt Ltd, incorporated in 1998 as part of the Sona Group of Companies, is a software solution provider based in Bangalore, INDIA.

UNISOFT INDIA is a techno savvy management group founded by a set of determined people having rich experience in technical know-how, sales, service & management. Ever since its inception, the company is providing excellent value-added services in Software products for business.

UniADMS is conceived by a think tank of senior members with over a decade of experience in automotive dealership functions and software development.

About UniADMS

This product is designed to meet the increasing demands of Automotive Service Function for the dealership and facilitate business growth. It should help in maximizing productivity and efficiency of the service centre and improve the effectiveness of service staff in serving their customers.

Auto dealers use software which is generally supplied by manufacturers which are mostly "vehicle sales" centric and may not cater to the entire needs of the dealership function and particularly the coverage of service function. Service function is the focal point of UniADMS software. It also includes sales & spare parts functions of the dealership.

Product Objective

Provide the dealership with an integrated software product to manage vehicle sales, service workshop functions right from scheduling appointments (service booking) to post service follow up and spare parts.

Include and automate all functionalities of Service starting from appointment, vehicle receiving, workshop loading, job processing, billing, delivery, warranty, estimates, schemes/campaigns, contracts, recalls and post service follow up thus covering the entire gamut of the value chain in service.

Interface to Accounting and HR functions.

Provide information to all users and management with an effective MIS and Information dashboard.

Features

- Convenient slots for appointments & walk-in customers.
- Proactive job progress monitoring to answer customer queries.
- Alert mechanism for inevitable delays, cost over-runs.
- Least data entry by picking up data from source like Appointment, Estimate, Contract ensuring minimal waiting time before customer gets attention.
- "Up selling" of schemes, campaigns, pending jobs during receiving by alerts based on previous service history & recommended maintenance schedules
- Multi-resource scheduling by linking bays/technicians to workshop resources. Dynamic Job clocking by technicians
- Predefined lists for Customer concerns, Job requests, Operations manual, Spare parts catalog and Masters.
- Post follow-up service alerts for scheduled maintenance.
- Information Dashboard from a single source to manage service functions.
- Standard reports & inquiries
